

Burndown Chart (Sprint 4)

Chart

Comments

For our final sprint, the majority of the work once again happened near the end of the sprint. There is a slight downward spike on March 23rd because we had a group meeting where we reviewed the JIRA board and adjusted the story progress to better reflect our real progress. The upward spikes happened as we added 3 new stories to the sprint (WEEB-99, WEEB-100, and WEEB-101). WEEB-101 was a new feature suggested for error messages, and WEEB-99 and 100 were expansions of previous stories.

To compare our planned velocity to our previous sprint's velocity, we fulfilled nearly double the story points in sprint 4 as we did in sprint 3. In sprint 3, we completed 39 points of user stories. In comparison, in sprint 4 we completed 76 points. The upward trend was because of a burst of motivation, given that this was our last sprint and we needed to have our major features ready for release.
