

Burndown Chart (Sprint 3)

Chart

Comments

This sprint, the bulk of our team's work happened at the end of the sprint. Hence, the burndown chart slopes steeply downward on the last few days. Going forward, our team will aim to procrastinate less and start working on user stories earlier on. On the other hand, we forgot to add the points estimations for a few stories (mainly, WEEB-87, WEEB-90, WEEB-83, and WEEB-86). This led to some upward slopes on the burndown chart.

To compare our planned velocity to our previous sprint's velocity, we fulfilled a similar number of story points in sprint 3 as we did in sprint 2. In sprint 2, we completed 42 points of user stories. In comparison, in sprint 3 we completed 39 points. The downward trend is because our team was busier with other classes during this sprint. Since next sprint is our last sprint before the release, we can foresee that we will complete more story points.
